

Australia's most consistently performing Managed Program

Market Check's flagship Managed Program, the Strategic Program has evolved since its inception in 2011 into much more than a post-harvest hedging strategy. The underlying hedging strategy has proven itself long-term, but the experienced strategy team now incorporates domestic stock re-positioning between states and grades, and options to manage price risk. There are barriers for growers to implement these strategies in the retail market and they can be expensive. The Strategic Program gives access to low execution fees and puts growers on a level playing field with global traders. As a truly independent company, Market Check only trades for the benefit of the program and does not trade as principle, as such our only motivation is to increase the total equity for our grower participants. Our Managed Programs can also be accessed by on-farm grain for approved sites.

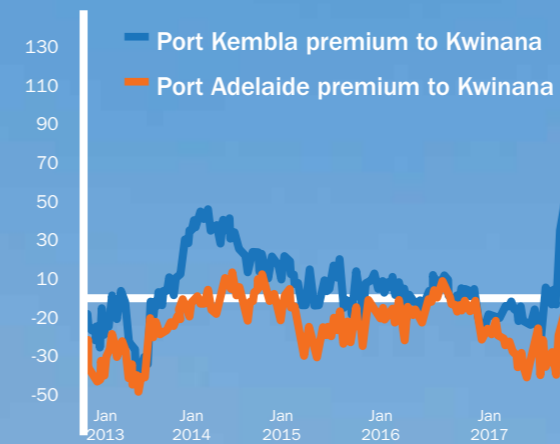

Performance: 6 year average over different grades

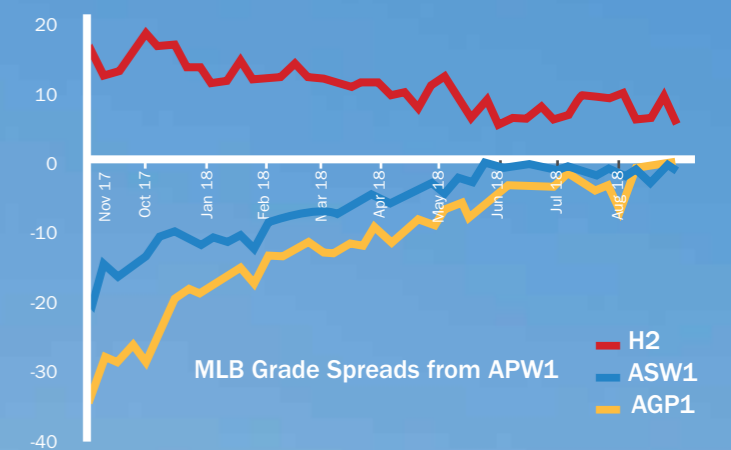

The Strategic Program's performance on average over the past 6 seasons compared to the NSW, VIC, and SA cash track markets net of all management fees, storage and interest. NPV brings the net pool return back to a harvest equivalent to allow comparison with average harvest prices. Please note: Past performance is not necessarily a guide to future performance.

Leverage spreads between port zones

Leverage spreads between grades

“Our Managed Programs are a way of executing part of the strategies we advocate as we are better equipped through our lower operational costs, global information reach, skill set and have the proven track record of performance.”

Tom Basnett, General Manager: Operations, Markets and Finance, Market Check
